

Let there be light – Skymark Factory wide Lighting upgrade completed

Skymark Packaging has long held a desire to conserve our environment. We produce innovative packaging solutions, efficiency projects and next level working methods. Whenever we explore a possibility to improve, we endeavour to involve our work force or (wherever possible) local companies that share the same philosophy as Skymark, reducing unnecessary carbon emissions associated with travel and logistics. One such example is our recently completed Lighting Upgrade project.

Together with our project partners at Eaton Electrical Systems, Skymark have delivered a considerable upgrade to its infrastructure and a significant improvement to the general feeling of well-being of its staff.

Our partners at Eaton Electrical Systems used their technical know-how and extensive product catalogue of British designed and manufactured lighting solutions to ensure that our objective has been met:

“At least Twice the usable light levels at ground level with less than half the running costs”.

We are delighted to report that we have successfully achieved both of our objectives by creating a working environment with a minimum of twice the previous light levels whilst saving in excess of 130,000kWh per annum of electricity in the process.

The project ensures that we do not only reduce our electricity consumption and associated Carbon emissions, but we have also reduced our operational costs. All the while, we have significantly improved our Employee Well-being by ensuring consistent light levels across the entire manufacturing plant, leading to reduced night-time fatigue.

Changing the lighting turned out to be a pretty bright idea...
